

## **EXPOSE-IT!**

## **RELEASE**

EXPOSE-IT! RELEASE is a transfer agent used under retarder to help reduce form cleaning after stripping of concrete.

### **Description**

This one coat material is applied prior to application of EXPOSE-IT! Form retarder to reduce clean up time of forms leaving them ready for the next cast.

### **Advantages:**

- Allow you to cast immediately after stripping.
- Reduces clean up
- Prevents pull outs or uneven edges
- Costs just pennies per square foot.

### **Surface Preparation:**

Forms must be clean, dry and non porous. Seal porous forms with Armorgard products or Form Seal.

### **Mixing:**

Material must be mixed prior to use. Mixing can be accomplished by mechanically, manually or by shaking and/or rolling containers.

### **Application:**

Apply by spray, brush or roller. Dry time is dependent on ambient temperature (usually a few minutes is all that is needed). Apply EXPOSE-IT! Form retarder when material is completely dry.

### **Clean Up:**

Clean tools and equipment with soap and water. Clean skin immediately with soap and water or industrial hand cleaner.

**Packaging & Coverage:**

300-400 square feet per gallon. EXPOSE-IT! Release is packaged in 55-gallon drums and 5-gallon pails.

**VOC:**

750 g/l

**Fire/Flammability:**

Highly Flammable

**Disposal:**

Refer to MSDS

**Storage:**

Store in a cool dry area.

**Warning:**

This is not a release agent! It is to be used exclusively under EXPOSE-IT! Form Retarder to aid in the transfer of that material. Make sure material is completely dry prior to application of EXPOSE-IT! Form Retarder.
